PROJECTS

Post Creator

www.habeebullahtabrez.github.io/http-requests-demo

This was one of my initial projects as a web developer. This project illustrates the usage of client server communication using http requests. It uses http methods to perform CRUD (Create, Read, Update & Delete) operations.

Meetup Organizer

www.habeebullahtabrez.github.io/meetup-organizer

This project helps in creating and displaying meetups (events) data. It stores and retrieves the details regarding the meetup articles in Google's Firebase Realtime Database. The frontend of the project was created using SvelteJs.

AstroPark

www.habeebullahtabrez.github.io/AstroPark

AstroPark is a full stack web application built using SvelteJs and ExpressJs. It comprises of the three main features: an APOD homepage, a media library and a Landsat Image Retriever (LIR). It uses the NASA API to fetch and display data from the NASA database.

E-Commerce Store

www.github.com/HabeebUllahTabrez/my-shop4

This project is a dummy E-Commerce website created using express.js framework. The pages of this website are rendered dynamically using a templating engine called EJS. The data is stored and retrieved from MongoDB Atlas.

Meetup Organizer (React)

www.github.com/HabeebUllahTabrez/meetup-organizer-react

This project helps in creating and displaying meetups (events) data. It stores and retrieves the details regarding the meetup articles in Google's Firebase Realtime Database. The frontend of the project was created using ReactJs.
